OPERATING PRINCIPLE

- The RM*-W valves are pressure control valves with threaded ports for panel mounting with a ring-nut fastening.
- They are available in two different sizes: RM2-W direct operated for flows up to 50 l/min; RM3-W pilot operated for flows up to 75 l/min.
- They are normally supplied with a countersunk hex adjustment screw, a locking nut and a maximum adjustment fastener.

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.
